

Quality & Environmental Policy

At EG Electronics, quality and sustainability are integral parts of how we do business. Our Quality and Environmental Management System supports our strategy, daily operations, and long-term development across all parts of the organization.

The policy provides a clear framework for setting and following up on quality objectives, supporting continuous improvement and long-term development.

We work in a structured and process-driven way to ensure consistent quality, efficient operations, and continuous improvement. Our management system provides clear processes, roles, and responsibilities that help us deliver reliable products and solutions while meeting the expectations of our customers and other stakeholders.

EG Electronics is committed to:

- Delivering high-quality products and services that meet customer and stakeholder requirements
- Complying with all applicable laws, regulations, and other binding requirements in the countries where we operate, including environmental legislation
- Protecting the environment, preventing pollution, and integrating environmental considerations into our business decisions
- Continuously improving the effectiveness of our quality and environmental management system

Our environmental commitments and priorities are defined in our Sustainability Policy and are fully integrated into our management system and daily operations.

The management system is applied across all EG Electronics entities and is regularly reviewed to ensure continued suitability, effectiveness, and alignment with our strategic direction.

Through strong leadership, employee engagement, and close cooperation with our partners, we aim to build long-term, trusted relationships and create sustainable value for our customers and society.
